

📍 MUNICH

Embedded Applications Developer (C++)

At Pixida, we are passionate technology consultants and developers for digitalization and mobility solutions. We are looking for an Embedded Applications Developer (C++) to develop the process from concept to implementation of current and future automotive services and products.

Your Responsibilities

- › Development of high-quality embedded applications using C++.
- › Conduction of technical requirements analysis.
- › Requirements engineering.
- › Concept/design and development/implementation of embedded applications.
- › Analysis of existing applications, as well as redesign, optimization, or extension.
- › Defect analysis and bug-fixing.
- › Conduction of manual and automated tests.
- › Documentation and source code documentation.
- › Regularly evaluating new embedded technologies and communication standards.

Our Requirements

- › Bachelor degree or a comparable education
- › At least 3 years of experience in building, maintaining, and testing embedded software solutions using C++ and MQTT.
- › Experience and knowledge of agile development using Jira.
- › Knowledge of the automotive industry is nice to have.
- › Excellent problem-solving and multitasking skills and a logical and pragmatic attitude.
- › Proficient English & German.

Achieve goals - join our driven community!
